

No more CELLULITE! ENDERMOLOGIE

Sassan Alavi, M.D.

Your wish has come true

Almost all women have cellulite and wish they could get rid of it. Cellulite results from weight gain, genetic predisposition, and inevitable hormonal changes throughout life. These factors cause the surface fat layer to increase in size in its pocket. The pocket is stretched upward and fibrosis develops in between them. This results in dimpling, inhibition of circulation, toxin and water trapping, "Cellulite".

Cellulite does not respond well to weight loss, exercise, creams or even surgical liposuction. Endermologie is the only method approved for cellulite reduction by the **American Food and Drug Administration**.

Endermologie is a **non-surgical** treatment. Our trained therapists perform specific maneuvers to the affected area with the hand held Endermologie arm. Intermittent suction and rhythmic rolling pulsation is delivered to the area being treated. This physically stretches and weakens the relating fibrous tissues, which tethers the dermis thus minimizes the dimples. It is interesting to note that most patients describe the action as relaxing as a body massage. The dramatic improvement to the look of the skin is also attributed to the deep stimulation of the circulation. It brings a massive surge of blood and oxygen to the affected areas and increases the lymphatic drainage.

Any woman with cellulite is a candidate for this treatment. Each session is 35 minutes, and a course of 6 to 14 sessions is generally suggested. After that a maintenance course will prevent the cellulite from recurring .

Imagine that frustrating cellulite disappearing before your eyes. As seen on **Oprah , CBS news, Allure, Mirabella, and Shape** magazine. Currently, 80,000 women in Europe are using Endermologie daily.

Dr. Alavi will be glad to review this procedure with you.

Fast Facts

Cellulite: Results from fibrosis, lack of circulation, and toxins trapped in the subcutaneous tissue.

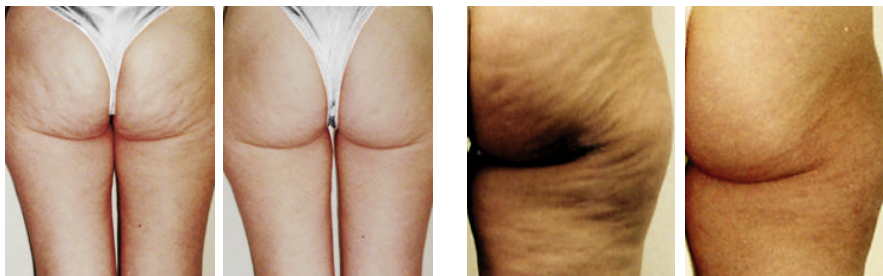

Cellulite does not respond well to weight loss, exercise, creams or even surgical liposuction.

Treatment: Endermologie is the only method approved for cellulite reduction by the American Food and Drug Administration.
